

# BR2-4 for imc CRONOSflex (CRFX/BR2-4)

## 4-channel high performance bridge measurement amplifier

The BR2-4 is a universal DC and CF bridge measurement amplifier for 4 channels and can also be used as a DC differential amplifier. It is capable of measuring:

- 4 strain gauges, with selectable DC or CF (AC) excitation
- LVDT
- Voltage and current (20 mA)
- IEPE/ICP sensors (with optional DSUB-15 plug)

### Highlights

- Carrier frequency excitation (5 kHz) for bridges and LVDT
- Single and dual sense line configurations are supported (e.g., 5/6-wire connection with full bridge)
- Symmetric bridge supply of 1 V, 2.5 V, 5 V with DC as well as with CF (AC) mode
- broken wire detection
- Integrated calibration resistor for shunt calibration
- Software selectable quarter-bridge completion 120 and 350  $\Omega$
- Graphical configuration wizard to set strain gauge bridges

### Typical applications

- Ideal for bridge measurements in CF mode with elevated requirements for noise suppression and stability, as well as LVDT and inductive displacement sensors.

### imc CRONOSflex - Frameless expansion, flexible modularity

The imc Click Mechanism and extruded aluminum case provide a firm mechanical and electrical connection. As a result, no mainframe or rack is needed.

An imc CRONOSflex system uses EtherCAT as an "internal" system bus for connecting various modules to the main base unit (CRFX-400 / CRFX-2000G). With the system bus, all imc CRONOSflex modules are guaranteed to be synchronized with each other. This allows various modules to be either connected in one central block or connected via standard network cable in a spatially distributed system.

Alternatively, connection can be made by means of standard Ethernet cables (RJ45, CAT5), thus creating a spatially distributed system.

Block isolation		
Parameter	Value	Remarks
Block isolation	60 V	all internal electronics isolated from the housing (CHASSIS, PE)
Isolation impedance	500 kΩ    1 nF	
Internal reference ground	-VB, GND, TEDS_GND	all channels with one common, galvanically connected reference ground
External reference ground	CHASSIS, metal housing	internal electronics as an entity, galvanically isolated from housing

Block isolation for improved suppression of ground loops and related interference. Does not constitute channel-wise individual isolation. Not rated nor intended for safety of equipment and personnel.

*Devices or modules purchased before ca. 2012 do not feature block isolation.*

Power supply of the imc CRONOSflex module			
Parameter	Value typ.	min. / max.	Remarks
Power supply	10 V to 50 V DC		
Power consumption	9.3 W		10 V to 50 V DC including bridge sensors (120 Ω 5 V all channels)
Isolation	60 V		nominal isolation specification of the supply input
Power-over EtherCAT (PoEC)	42 V to 50 V DC		supply via EtherCAT network cable

Terminal connections of the imc CRONOSflex module		
Parameter	Value	Remarks
EtherCAT connection	2x RJ45	system bus for distributed imc CRONOSflex components
Input supply plug (female)	LEMO.EGE.1B.302	multicoded 2 notches for optional individually power supply
